

TacTiles™

Glue-Free Installation You Can Count On

Inspired by the gecko's ability to seemingly "stick" to surfaces, the TacTiles system creates a stable carpet tile installation with no glue at all. It's easy to use, creates less mess and provides greater flexibility for installation and selective replacement. With virtually zero VOCs and an environmental footprint that's more than 90% lower than traditional carpet adhesives, TacTiles are a perfect fit with your sustainability initiatives.

Easy to use

- Just pull, peel and stick – no special equipment needed.
- In-house staff can quickly replace soiled or damaged tiles.
- Install over almost any floor type, including raised access flooring.
- No liquid components mean they won't lose adhesion by freezing or "melting".
- Remove whole sections of the floor at one time for renovations or moving.
- Neatly stack used carpet tiles without making a sticky mess
- Simply attached to the back of Interface carpet tiles - one in each corner

"The maintenance department uses TacTiles exclusively because it saves a lot of man hours and we can do it with kids in the classrooms. There are no fumes, no odors and no mess so it's pretty quick and easy." — Marty Foutch, Facilities Director, Bixby Schools

.The use of TacTiles to install modular flooring is patented by Interface. Only Interface products may be installed with TacTiles connectors.
