

Forbo Cleaning & Maintenance Guide - Onyx+ wall vinyl

Forbo Cleaning and Maintenance advice:

Onyx+ surface was studied to be cleaned with a wet sponge (non abrasive pad) and using a neutral detergent (pH 6/8), followed by rinsing water.

Initial clean before use

For newly installed walls the adhesive should dry 48 hours before putting the wet room into service;

- 48 hours of drying time is sufficient for absorbent surfaces
- A week might be necessary for non-absorbent surfaces

Daily/weekly cleaning

Act immediately to eliminate typical household stains. Simply wipe with a sponge and clean water. A brush with soft bristles can also be used. **Caution: Never use abrasive pads.**

General advice:

- Clean the wall covering regularly, as this is more cost-effective and hygienic than occasional heavy-duty cleaning.
- Wipe up any grease and spilt oil immediately, as they may damage the surface.
- Always follow dosage instructions carefully. Always follow the instructions given by the manufacturer of the cleaning product (dilution rates, method of application, etc.). Avoid mixing products of different brands (risk of incompatibility).
- Vinyl wall coverings are damaged by solvents.
- Remember that lighter colours need more frequent cleaning.
- Avoid the accumulation of stains, splashes of maintenance products, soap or shampoo.

Specific stains

Deal with chewing gum, iodine, wax and lipstick immediately. Pour a little 90° alcohol onto a clean cloth, dab to avoid spreading the stain, repeat if necessary. Always rinse well with clean water after removing stains.

Monthly

- Clean with a brush (soft bristles) and neutral detergent (pH 6-8) diluted in warm water. Rinse with clean water.
- We also recommend a general clean from time to time using a detergent that can be used diluted in water in a higher concentration, followed by rinsing with clean water.
- It is important to avoid the accumulation of stains, in particular oily deposits from splattering in kitchens, and soap and shampoo residues in bathrooms.
